

# permaban *Signature* **ar**<sup>®</sup>

Repair your damaged construction joint arrises once and for all.

## No more disruption

Damaged construction joints in a warehouse or factory floor can slow operations, and cause equipment damage too.

Permaban Signature AR solves the problem once and for all. It's a professional joint repair system which provides a strong, permanent solution for damaged floor joints.

## No more impact, no more damage

At the heart of the AR system is Permaban's Signature armoured joint. Its half-hexagon shape means traffic can move smoothly across the joint, in any direction, without causing joint impact or damage. So by repairing your joint with Signature AR you can improve the joint's performance too!

## A professional repair system

Signature AR is more than just a replacement joint. It's an entire repair system which uses professional, industrial-quality products from RCR Flooring Products – a replacement construction joint, concrete bonding agent, screed and appropriate surface finishes. The result is a complete, once-and-for-all joint repair, requiring no ongoing maintenance.

## Adaptable and robust

Unlike other joint-based repair systems, Signature AR uses short lengths of joint which can easily be clipped together to repair longer sections if required.

Manufactured from a glass reinforced polymer, the joint is not only extremely tough but easy to handle, corrosion free, resistant to most chemicals and non-conductive.
